

# Is **BULK SOAP** *compromising* your HACCP program?

## How does bulk soap become contaminated?

Bulk soap dispensers are open to the environment. Germs grow inside because it isn't practical for maintenance personnel to properly clean and sanitize them each time they are refilled. New soap becomes tainted as it is added to contaminated soap.

Bacteria spread to unsuspecting users who *think* they are getting clean. Bulk soap compromises your HACCP program...and puts your business at significant risk.

## Don't put your business at risk.

A recent study<sup>1</sup> by the University of Arizona found that **25% of refillable bulk soap dispensers contain unsafe levels of bacterial contamination.**

- Coliforms, illness causing fecal-based organisms, were found in 16% of the samples
- Average user gets over one million bacteria per use<sup>2</sup> (more than an average toilet)
- No bacterial contamination was found in soap dispensed from sanitary sealed systems

# Solidify your HACCP program with GOJO

GOJO has a complete line of products for food processing environments including dispensing systems designed for wash down environments. Our complete program, the GOJO Hygiene Management System, is built to promote HACCP compliance. For healthy hands, trust GOJO.

For more information on the GOJO food processing program visit <http://foodprocessing.GOJO.com> or call 1-800-321-9647.

## GOJO® SANITARY SEALED™ refills are safe, smart and simple

- Safe:** The soap inside is protected from contamination because it is factory sealed and includes a fresh nozzle with each refill.
- Smart:** The logical choice for helping prevent the spread of germs.
- Simple:** Virtually labor free; snap in a new refill in seconds.
