

Is **BULK SOAP** *spreading germs* to your students?

How does bulk soap become contaminated?

Bulk soap dispensers are open to the environment. Germs grow inside because it isn't practical for maintenance personnel to properly clean and sanitize them each time they are refilled. New soap becomes tainted as it is added to contaminated soap.

Bacteria spread to unsuspecting users who *think* they are getting clean. Bulk soap compromises your hand hygiene program...and puts your students at risk.

Don't put your students at risk.

A recent study¹ by the University of Arizona found that 25% of refillable bulk soap dispensers contain unsafe levels of bacterial contamination.

- Coliforms, illness causing fecal-based organisms, were found in 16% of the samples
- Average user gets over one million bacteria per use² (more than an average toilet)
- No bacterial contamination was found in soap dispensed from sanitary sealed systems

The HEALTH of students is in YOUR HANDS.

GOJO has a comprehensive program for teaching and encouraging good hand hygiene habits. The program includes curriculum to help teach kids about hand hygiene, sanitary foam soap systems and PURELL® Instant Hand Sanitizer. For healthy hands, trust GOJO.

For more information about our complete hand hygiene program, visit <http://education.GOJO.com> or call 1-800-321-9647.

GOJO® SANITARY SEALED™ refills are safe, smart and simple

- Safe:** The soap inside is protected from contamination because it is factory sealed and includes a fresh nozzle with each refill.
- Smart:** The logical choice for helping prevent the spread of germs.
- Simple:** Virtually labor free; snap in a refill in seconds.
